This is the amino acid sequence of the murine U4 protein from the CC This is the amino acid sequence of the murine U4 protein from the CC This is the modulation of cell proliferation, or the immune cc invention for the modulation of cell proliferation, or the immune cc used to produce recombinant CC Invention for The U4 protein is used to screen for specific binding cgents, raise antibodies. It is also used as reagents for assays and capants, raise antibodies. It is also used as reagents for assays and compositions which may modulate cell proliferation, cell differentiation, and the immune system (e.g. for treating immune CC cented) thereived or the result of infection, autoimmune diseases, concer, and allergy).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents a protein designated Zcytor5, which a cytokinin-like receptor. Soluble Zcytor5 may be administered to down-regulate the effects of a growth and/or maintenance factor in thyroid, heart, and skeletal muscle for example to lessen the effect of cardiotrophin-l on cardiac pathologies, so preventing heart enlargement. Zcytor5 could be used to detect cardiotrophin-l in the blood, and to discover other possible Zcytor5 ligands. A probe comprising Zcytor5 DNA or RNA can be used to determine the presence and integrity of the Zcytor5 gene on chromosome 19. Antibodies and therapeutically to modify Zcytor5 ligand effects.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Rat Zcytor5 protein.

The present sequence represents an allelic varaint of protein designated Ecytor5, which is a cytckinin-like receptor. Soluble Zcytor5 may be administered to down-regulate the effects of a growth and/or maintenance factor in thyroid, heart, and skeletal muscle for example to lessen the effect of cardiotrophin-l on cardiac pathologies, so preventing heart enlargement. Zcytor5 could be used to detect cardiotrophin-l in the blood, and to discover other possible Zcytor5 ligands. A probe comprising Zcytor5 DNA or RNA can be used to determine the presence and integrity of the Zcytor5 gene on chromosome 19. Antibodies and the anti-idiotypic antibody could be used to purify Zcytor5 and therapeutically to modify Zcytor5 ligand effects.

Soluble Zcytor5 may be administered to down-regulate the effects of a growth and/or maintenance factor in thyroid, heart, and skeletal muscle for example to lessen the effect of cardiotrophin-1 on cardiac pathologies, so preventing heart enlargement. Zcytor5 could be used to detect cardiotrophin-1 in the blood, and to discover other possible Zcytor5 ligands. A probe comprising Zcytor5 DNA or RNA can be used to determine the presence and integrity of the Zcytor5 gene on chromosome 19. Antibodies and therapeutically to modify Zcytor5 ligand effects.

New nucleic acid encoding U4 haematopoletin receptor superfamily PT Chain - potentially useful, e.g. for modulating cell proliferation or immune response, for treating cancer and auto: immune disease PS Claim 9; Pagees 29-30; 38pp; English.

CC This is the amino acid sequence of the human U4 protein from the haematopoletin receptor superfamily, used in the method of the CC Invention for the modulation of cell proliferation, or the immune CC response. Transformed mammalian cells are used to produce recombinant U4 protein. The U4 protein is used to screen for specific binding CC agents, raise antibodies. It is also used as reagents for assays and CC as tissue markers for isolation of cognate ligands and receptors, and cell differentiation, and the immune system (e.g. for treating immune CC deficiency, inherited or the result of infection, autoimmune diseases, Sequence 408 AA;

The present sequence represents a Zcytor5 variant protein. Zcytor5 is a cytokinin-like receptor. Soluble Zcytor5 may be administered to down-regulate the effects of a growth and/or maintenance factor in thyroid, heart, and skeletal muscle for example to lessen the effect of cardiotrophin-1 on cardiac pathologies, so preventing heart enlargement. Zcytor5 could be used to detect cardiotrophin-1 in the blood, and to discover other possible Zcytor5 ligands. A probe comprising Zcytor5 DNA or RNA can be used to determine the presence and integrity of the Zcytor5 gene on chromosome 19. Antibodies and therapeutically to modify Zcytor5 ligand effects.

Zcytor5 could be used to detect cardiotrophin-1 in the blood, and to discover other possible zcytor5 ligands. A probe comprising Zcytor5 DNA or RNA can be used to determine the presence and integrity of the Zcytor5 gene on chromosome 19. Antibodies and therapeutically to modify Zcytor5 ligand effects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 1; Page 81-82; 55pp; English.

The present sequence represents a Zcytor5 variant protein. Zcytor5 is a cytokinin-like receptor. Soluble Zcytor5 may be administered a down-regulate the effects of a growth and/or maintenance factor in thyroid, heart, and skeletal muscle for example to lessen the effects of a growth and or example to lessen the effects of a growth and or example to lessen the effects of a growth and or example to lessen the effects of a growth and or example to lessen the effects of a growth and or example to lessen the effects of a growth and or example to lessen the effects of a growth and or example to lessen the effects of a growth and or example to lessen the effects of a growth and or example to lessen the effects of a growth and or maintenance factor in the effects of a growth and or maintenance factor in the effects of a growth and or maintenance factor in the effects of a growth and or maintenance factor in the effects of a growth and or maintenance factor in the effects of a growth and or maintenance factor in the effects of a growth and or maintenance factor in the effects of a growth and or maintenance factor in the effects of a growth and or maintenance factor in the effects of a growth and or maintenance factor in the effects of a growth and or maintenance factor in the effects of a growth and or maintenance factor in the effects of a growth and or maintenance factor in the effects of a growth and or maintenance factor in the effects of a growth and or maintenance factor in the effects of a growth and or maintenance factor in the effects of a growth and or maintenance factor in the effects of a growth and or maintenance factor in the effects of a growth and or maintenance factor in the effects of a growth and or maintenance factor in the effects of a growth and or maintenance factor in the effects of a growth and or maintenance factor in the effects of a growth and or maintenance factor in the effects of a growth and or maintenance factor in the effects of a growth and or maint
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Adams RL,

Zcytor5 is a cytokinin-like receptor. Soluble Zcytor5 may be administered to down-regulate the effects of a growth and/or maintenance factor in thyroid, heart, and skelatal muscle for example to lessen the effect of cardiotrophin-l on cardiac pathologies, so preventing heart enlargement. Zcytor5 could be used to detect cardiotrophin-l in the blood, and to discover other possible Zcytor5 ligands. A probe comprising Zcytor5 DNA or RNA can be used to determine the presence and integrity of the Zcytor5 gene on chromosome 19. Antibodies and therapeutically to modify Zcytor5 ligand effects.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents a Zcytor5 variant protein. Zcytor5 is a cytokinin-like receptor. Soluble Zcytor5 may be administered to down-regulate the effects of a growth and/or maintenance factor in thyroid, heart, and skeletal muscle for example to lessen the effect of cardiotrophin-l on cardiac pathologies, so preventing heart enlargement. Zcytor5 could be used to detect cardiotrophin-l in the blood, and to discover other possible Zcytor5 ligands. A probe comprising Zcytor5 DNA or RNA can be used to determine the presence and integrity of the Zcytor5 gene on chromosome 19. Antibodies and therapeutically to modify Zcytor5 ligand effects.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Zcytor5; cytokinin-like receptor; down-regulation; growth fact maintenance factor; thyroid; heart; skeletal muscle; cardiotro cardiac pathology; heart enlargement; Zcytor5 ligand; variant.

Zcytor5 could be used to detect cardiotrophin-1 in the blood, and to discover other possible Zcytor5 ligands. A probe comprising Zcytor5 NA or RNA can be used to determine the presence and integrity of the Zcytor5 gene on chromosome 19. Antibodies and therapeutically to modify Zcytor5 ligand effects.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         is a cytokinin-like receptor. Soluble 2cytor5 may be administered down-regulate the effects of a growth and/or maintenance factor thyroid, heart, and skeletal muscle for example to lessen the example the example to lessen the example to lessen the example to lessen the example the

Soluble Zcytor5 may be administered to down-regulate the effects of a growth and/or maintenance factor in thyroid, heart, and skeletal muscle for example to lessen the effect of cardiotrophin-1 on cardiac pathologies, so preventing heart enlargement. Zcytor5 could be used to detect cardiotrophin-1 in the blood, and to discover other possible Zcytor5 ligands. A probe comprising Zcytor5 DNA or RNA can be used to determine the presence and integrity of the Zcytor5 gene on chromosome 19. Antibodies and the anti-idiotypic antibody could be used to purify Zcytor5 and the anti-idiotypic antibody could be used to purify Zcytor5 and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cardiac pathology; heart

The present sequence represents a Zcytor5 variant protein. Zcytor5 is a cytokinin-like receptor. Soluble Zcytor5 may be administered to down-regulate the effects of a growth and/or maintenance factor in thyroid, heart, and skeletal muscle for example to lessen the effect of cardiotrophin-l on cardiac pathologies, so preventing heart enlargement. Zcytor5 could be used to detect cardiotrophin-l in the blood, and to discover other possible Zcytor5 ligands. A probe comprising Zcytor5 DNA or RNA can be used to determine the presence and integrity of the Zcytor5 gene on chromosome 19. Antibodies and to anti-idiotypic antibody could be used to purify Zcytor5 and therappeutically to modify Zcytor5 ligand effects.

CC The present sequence represents a Zcytor5 variant protein. Zcytor5

CC is a cytokinin-like receptor. Soluble Zcytor5 may be administered to down-regulate the effects of a growth and/or maintenance factor in CC thyroid, heart, and skeletal muscle for example to lessen the effect CC of cardiotrophin-l on cardiac pathologies, so preventing heart CC enlargement. Zcytor5 could be used to detect cardiotrophin-l in the CC comprising Zcytor5 DNA or RNA can be used to determine the prose CC comprising Zcytor5 DNA or RNA can be used to determine the presence and integrity of the Zcytor5 gene on chromosome 19. Antibodies and the CC and integrity of antibody could be used to purify Zcytor5 and the CC therapeutically to modify Zcytor5 ligand effects.
                                                                                                                                                                                                                                                                  õ

Title: US-09-037-657-13
Perfect score: 2251
Sequence: 1 MPAGRPGPVAQSARRPPRPL......WRAWMQKSHKTRNQVLPAKL 413

Searched: 122810 segs, 40065486 residues

Scoring table:

BLOSUM62

Database : PIR_60:* 1: pir1:* 2: pir2:* 3: pir3:*

pir4:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
